USINA CORURIPE

PRODUZINDO ENERGIA PARA A VIDA

Usina Coruripe Reports BRL 397.4 Million in EBITDA year-to-date for the 2026/27 Crop Season

The cumulative performance of Usina Coruripe through August of the 2026/27 crop season was marked by significant improvements in operational indicators, reflecting the quality of the investments made and demonstrating the efficiency of the Company's operational processes. Cumulative sugarcane crushing reached **8.43 million** tons, representing a **7.7% increase** compared to the same period of the previous crop season. In the agricultural segment, the highlight was the **19.0% increase in ATR (Total Recoverable Sugar) per hectare**, evidencing substantial productivity gains and a higher capacity for value generation per cultivated area. These results reinforce the Company's competitiveness and demonstrate consistent progress in raw material quality and agricultural performance.

In the industrial segment, the Company maintained its growth trajectory, increasing sugar equivalent production by 7.5%, while ethanol production grew by 31.7% compared to the same period of the previous crop season. This performance demonstrates Coruripe's ability to capture operational gains through a more efficient production mix aligned with market opportunities, further strengthening its competitive position within the industry.

A more challenging pricing environment for the Company's products limited the conversion of operational gains into revenue and margins throughout the period. Nevertheless, international sugar prices have recently shown signs of recovery. The New York sugar contract has once again traded above 18 cents per pound (cents/lb) and has appreciated by approximately 21% over the last 45 days, driven by the reduction of speculative short positions held by investment funds and by more favorable market fundamentals. Coruripe delivered a solid operational performance, supported by increased production volumes, agricultural and industrial efficiency, and rigorous cost management. This performance underscores the resilience of the Company's operating model and its ability to generate results even in less favorable market conditions, as reflected in an **Adjusted EBITDA of BRL 397.4 million**.

From a financial perspective, the Company achieved an important strategic milestone by strengthening its capital structure. The monetization of credits related to the IAA/4870 legal claim generated a liquidity event totaling BRL 1.5 billion, which contributed to a significant reduction in net debt. As a result, **net debt decreased from BRL 3.6 billion to BRL 2.8 billion**. In addition to accelerating the deleveraging process, this transaction enhanced the Company's liquidity position, strengthened its financial indicators, and created more favorable conditions for accessing new sources of financing. As a result, the Company gained greater financial flexibility to support growth and maintain the consistency of its operational performance.

In summary, Usina Coruripe continues the 2026/27 crop season supported by solid operational fundamentals, significant productivity gains, and a substantially stronger capital structure. Even in a less favorable pricing environment, the Company has demonstrated operational resilience, strong execution capabilities, and enhanced financial flexibility. Consequently, it is strategically positioned to capture value, strengthen its competitiveness, and sustain growth in the coming cycles.
